NEW GENERATION DAF XD

Powering your Success

DAF Transport Efficiency

Taking distribution to a whole new level

A PACCAR COMPANY DRIVEN BY QUALITY

DAF

DAF XD.
Next-level drivability.

Safety, efficiency, uptime and driver comfort. The XD takes everything that makes New Generation DAF trucks excellent and lifts them to the next level. Applying state-of-the-art technology and smart design to create a truck that's cleaner, quieter, greener and more aerodynamic. When your fleet is performing at this level good things come naturally.

Future-proof and planet-friendly

DAF trucks bring your business further. Whether your fleet needs to be electric, diesel or a mix of the two, our trucks come with smart technologies that help you run a more efficient business. They're tough too. With powerful engines and advanced drivetrains that deliver a daily performance you can rely on, whatever the conditions out on the road.

And should anything happen, you can count on our extensive warranty along with predictive and proactive customer support. All backed by a matchless network of service centres and top technicians, to keep your fleet up and running.

In DAF you've got a partner who understands what you need to succeed. We help you maximise earnings per kilometre, by shrinking operating and maintenance costs while boosting fuel efficiency, uptime and ROI. And our wide range of diesel and electric models not only meets every transport need but can also be further customised to your unique business requirements. So you really are spoilt for choice.

Like our customers, at DAF we never stand still. Continuously investing in everything from new technologies and charging infrastructure to advanced connectivity and telematics for optimised fleet management. Leaving you ready for wherever your business may take you.

DAF Transport Efficiency

In the transport industry, earnings per kilometre is the key metric for a successful business. DAF Transport Efficiency (DTE) is the guiding philosophy we have developed to help our customers optimise this. It is the lens through which we design vehicles, build services, train our people and support our customers.

DTE consists of three interrelated elements: Uptime (keeping every truck earning); Efficiency (delivering optimal performance for your business); and Driver Comfort (empowering driver excellence). Together they form the promise we make to our customers.

Uptime

DAF Uptime Services is our integrated approach to keeping customers' vehicles moving, ensuring a fundamentally more resilient and predictable business.

At the heart of this approach is TruckIQ, DAF's connected services platform that brings together our key services to maximise vehicle uptime and minimise unexpected downtime.
We study vehicle data and update software when needed using Remote Updates. With PreDiagnostics, we ensure the right technicians and materials are in place to 'pitstop' regular maintenance, reducing service time. And with Smart Service Alerts we identify potential issues early and schedule service quickly to help avoid unexpected downtime.

Efficiency

We combine technological expertise and transport experience to develop award-winning trucks that maximise performance and efficiency, minimising operating costs for both diesel and electric drivelines. Through continuous innovation, we optimise fuel and energy use. While supporting today's diesel needs with solutions that reduce CO_2 emissions. And we are building the technical foundation for advanced electric powertrains, helping customers transition confidently to zero-emission transport.

Driver Comfort

Our world-beating cabs are designed to optimise driver comfort and safety. Advanced systems protect and assist drivers while being intuitive and easy to use. Regular feedback from DAF driver forums helps to further improve their experience. We additionally provide driver training in road safety and fuel efficiency. This helps companies invest in their people and boosts driver loyalty and retention. It also ensures smarter driving, increases productivity and saves on downtime by reducing accidents. Just some examples of how everything we do contributes to DTE and our goal of maximising earnings per kilometre.

DTE
DAF TRANSPORT EFFICIENCY

The power of safety

Safety in the city was one of our top priorities when creating the New Generation DAF XD. The low cab position, large windscreen, ultra-low beltlines and kerb-view window all combine to create the industry's best direct view. At the same time, advanced tech like the DAF Digital Vision System ensures the optimum indirect view, while super-smart driver assistance systems and a special protruding bumper design contribute to a level of safety simply unmatched in its class. No wonder the XD was awarded a maximum 5 star rating in the Direct Vision Standard set by Transport for London.

DAF DIGITAL VISION SYSTEM

For the optimum indirect view, the DAF Digital Vision System is standard on most models. It features high-mounted heated cameras in foldable arms, delivering a perfect view in all weather conditions.

LOW BELTLINES AND LARGE WINDSCREEN

Components are packaged behind the grille and below the dashboard to create the lowest possible beltlines for the windscreen and side windows.

VISION DASHBOARD

Provided as standard, the new Vision Dashboard slopes steeply down to the windscreen on the co-driver's side. Letting you take full advantage of the extra-low beltlines.

KERB VIEW WINDOW

For a perfect view of everything outside the co-driver's side, there's an optional kerb view window.

DAF CORNER VIEW

A camera replaces kerb- and front-view mirrors. Providing a larger field of vision and clear view of the area around the co-driver side.

Hands on the wheel, eyes on the road

Drivers need to be focused on the road, looking out for pedestrians, cyclists and other road users. So the New Generation XD design embraces DAF's 'hands on the wheel, eyes on the road' philosophy.

Primary functions for drivers are controlled from the steering wheel or column stalks. For example, the TraXon gearbox controls, digital display, audio system and phone. Secondary functions are operated via dashboard switches.

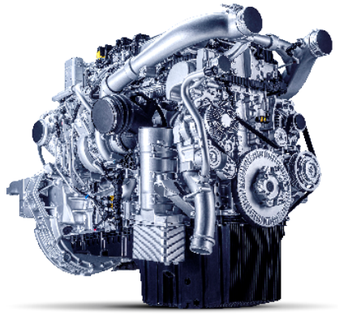

Safety in and around the truck

The XD's many active safety features include on-screen blind spot warnings, Brake Assist, Lane Departure Warning, Emergency Brake Lights and DAF Turn Assist. Plus new additions like DAF Electronic Park Brake for smart control, a Low-Speed Trailer Brake for safe (un-)coupling and Park Brake Assist for enhanced braking power when needed.

The power of efficiency

From vehicle weights and payloads to serviceability and uptime, the New Generation DAF XD sets completely new standards in efficiency. Maximising performance while minimising your emissions and total transport costs. So your fleet isn't just looking good. It's doing good, too.

Engine and driveline optimisations

We've optimised our driveline components for distribution uses. For example, with advanced PACCAR PX-7 and MX-11 engines that deliver fuel efficiency, superior performance and more driver comfort.

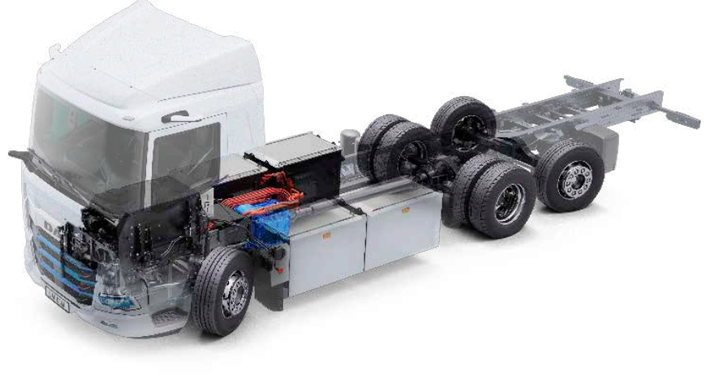

The PX-7 is a compact, lightweight engine ideal for urban and regional distribution, offering excellent fuel economy and payload benefits. The MX-11 provides more power and torque, making it perfect for heavier-duty applications and longer distances. Just some of the reasons the New Generation DAF XD was crowned 'International Truck of the Year 2023'.

Perfect aerodynamics

We put the New DAF XD vehicles through extensive simulations and road tests to create a design that minimises air drag, fuel consumption and ultimately your CO_2 footprint.

Advanced electric engines

The DAF XD Electric features a PACCAR EX-D1 or EX-D2 permanent magnet motor, delivering 170 to 350 kW. Operating range is 500+ km per charge and up to 1000 km daily (depending on battery choice). These motors are paired with industry-leading LFP battery technology, known for its durability, safety and sustainability. With a usable energy capacity of up to 88% and no use of rare earth materials, DAF ensures long-lasting performance and minimal environmental impact — keeping your fleet efficient and future-proof.

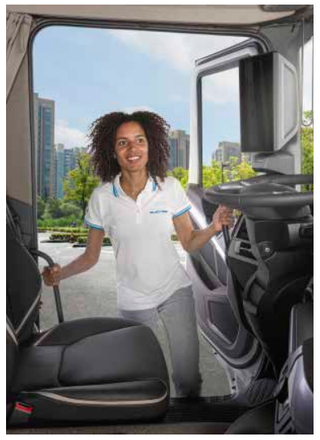

The power of comfort

There's a reason DAF trucks are recognised across the industry as the benchmark for driver comfort. Dashboard, seats, beds, driveline, suspension… It all adds up to the perfect setup.

Not just for driving but also for resting and daily admin. Reflecting a loyalty to your drivers that they will appreciate.

Easy entry

You notice the difference the moment you climb effortlessly into the spacious cab thanks to the standard two-step entry. More than enough room to stand. Maximum space for storage. And seats you can adjust just that bit further for an optimal driving position. There's even room for an optional fridge, to keep drivers' refreshments (and meals) cool.

Superb spaciousness

The cab offers incredible spaciousness to support drivers throughout their working day. With generous standing room, smart storage options, and a well-designed bunk area.

The Sleeper and Sleeper High cabs feature the same large under-bunk storage found in all New Generation DAF vehicles.

Discover the New Generation DAF. There's one for every need.

Alongside the versatile XD, designed specifically for intercity distribution, DAF has a wide range of models that can be tailored to meet every operational need. This includes the compact XB, ideal for urban driving, and long haul models like the spacious XG fleet truck and the flagship XG+ both built for comfort on extended journeys. And then there's the XD's big brother, the XF. A trusty all-rounder, the XF comes with an MX-13 engine for extra power.

Every truck unique

Different transport applications mean different requirements. So every DAF truck is built to order, based on your preferences. There's a wide choice of cabs, chassis, drivetrains and axle configurations. And with the lowest per-kilometre operating costs and best cab design in the industry, superb transport efficiency, safety and driver comfort come as standard.

Total transport solution

Efficient transportation means more than just great trucks, so at DAF we offer a total transport solution. Our professional network of dealers can help you pick the right vehicle and even arrange the financing. They then keep your fleet running optimally, with customised repair & maintenance service plans and streamlined operations via the PACCAR Connect portal.

Driving zero emissions

Going electric? We begin by listening...

Because we first want to have a full picture of your operational requirements. Only then do we apply our technical expertise and broad experience in developing electric trucks to help you configure your vehicles and infrastructure. So you have everything you need and nothing that you don't.

Electric vehicles

For many companies, the transition to electric distribution is a big step. You want to know exactly how it will affect your business. Using your knowledge of transportation and our technical expertise, we guide you through each of the areas where the transition can impact your operations.

Smart routing, tailored planning

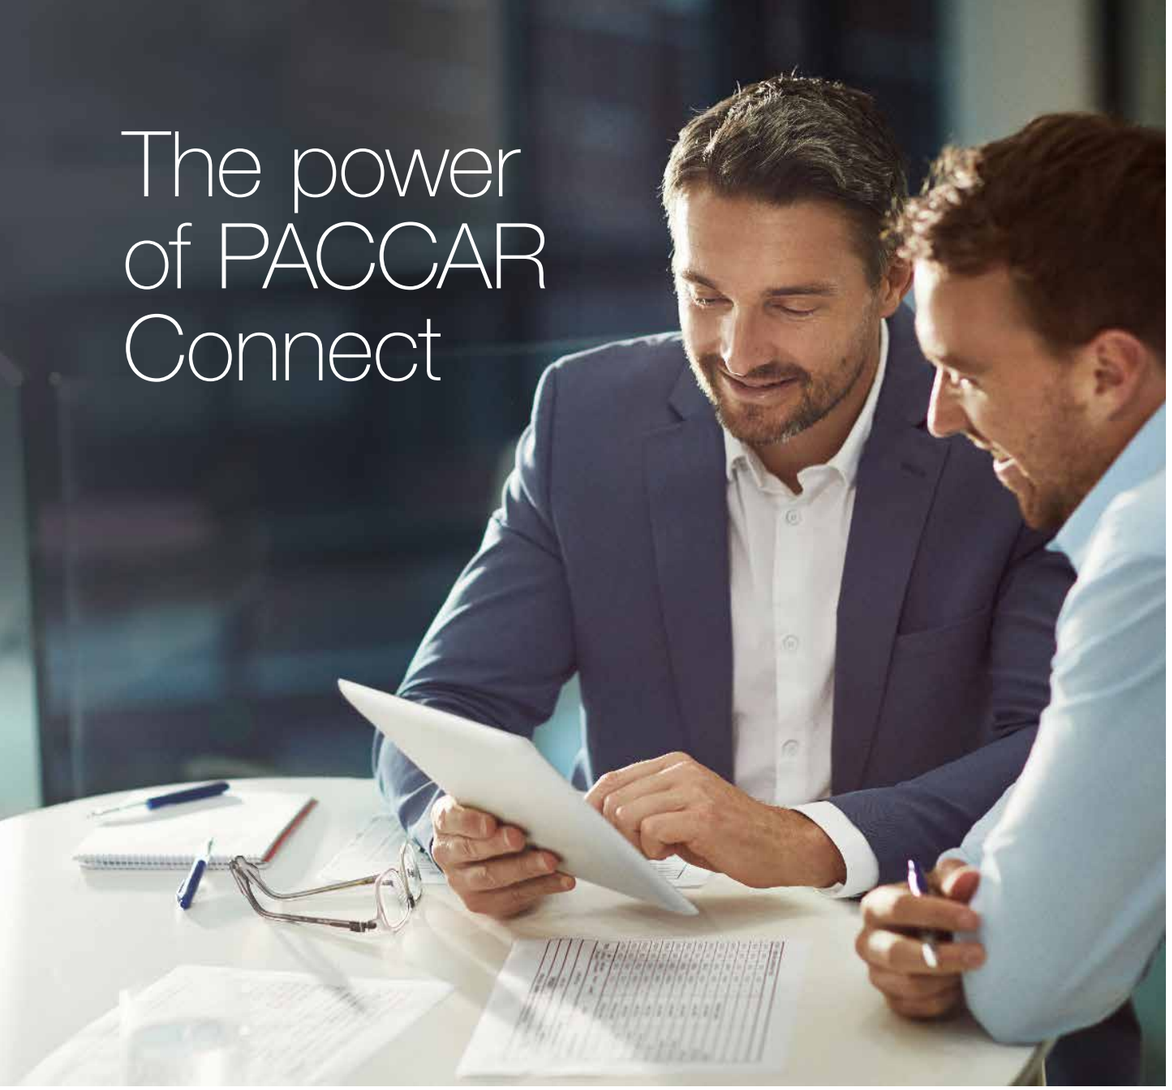

Covering everything from rules & regulations to route planning and from charging infrastructure to driver experience, we tailor the perfect solution for your business. Starting with sound pre-sales advice, we make sure your electric vehicle, charging strategy and service contracts are all configured to meet your specific priorities.

Charging solutions

Every company has its own unique mix of routes, shifts and needs. We can help you identify the best charging solution mix for your fleet, whether that's offerings from our own range of PACCAR chargers, specifically designed to work with DAF trucks, and/or public charging points. You know what your business needs, we make sure you get it.

The power of PACCAR Connect

PACCAR Connect puts you in control of your business processes. Connected services that mean simplified daily operations via our adaptable Portal Services. Deeper insights into your fleet's performance from our open yet secure Data Services. And flexibility, thanks to our trusted Mobile Services. PACCAR Connect comes standard with every new DAF truck.

Portal to success

The PACCAR Connect portal is intuitive to use and customisable to your needs. You can tailor alerts and automate reports to streamline transport operations. It simplifies the lives of your drivers too, with software solutions all on one screen. And the onboarding process to our Data Integration Services couldn't be easier.

Tried and trusted

No manufacturer provides better vehicle data than DAF, ensuring you have reliable insights into your operations at all times. Our secure data systems keep your valuable information safe and protected. While our secure mobile device management gives you complete control over what your drivers see on their mobile devices, ensuring their safety and yours.

DAF. With you all the way.

You need a fleet that keeps delivering to the highest possible standards, year in and year out. At DAF we have the services, expertise and experience to make sure that happens.

Support from day one and before

We see you as a partner from the day you first consider buying one of our trucks. And with over 1,000 dealers and service points worldwide, the DAF dealer network offers a one-stop shop for all your needs: new and used trucks, financing, parts, accessories and repair & maintenance contracts for trucks and related equipment, including customised service plans like DAF MultiSupport for scheduling preventive maintenance.

Once you've decided what you need, PACCAR Financial helps you develop the tailored financing solution that's right for you. Drawing on over 50 years' experience in financing the transport sector, we can provide everything from financial and operational leases to hire purchase and insurance.

If you decide a good-as-new DAF used truck is your best option, we help you select the ideal vehicle, which always comes with detailed service records and access to our pan-European dealer network for service, maintenance and spare parts.

On and off the road, we're there for you

Besides an extensive network of high-quality dealers and service points, we also cater for self-repairing fleets. PACCAR Parts Europe gives you access to over 100,000 genuine PACCAR and DAF parts, as well as over 80,000 universal TRP parts for all makes of truck and trailer, including workshop supplies. The DAF and TRP webshops make ordering parts super-easy and deliveries take place worldwide within 24 hours.

Should there be an issue in Europe, DAF International Truck Service is only a phone call away. With 24/7 support from experienced operators in 10 languages, we make sure you get the assistance you need so your truck is back on the road before you know it.

And we go further. DAF Driver Academy courses teach drivers how to maximise their truck's fuel efficiency and vehicle uptime. While DAF PreDiagnostics sends technicians the data on a truck's systems prior to a maintenance service. So they know which components need extra attention and can order parts and schedule repairs in advance. And Smart Service Alerts even spot potential breakdowns before they happen, so you can quickly plan a service to avert unexpected downtime.
